

CENTRIPETAL ADVISORS

V2 Website Progress Report

Isolated GitHub Pages build — SEO, AI surfaceability, and content exploration

Prepared August 19, 2026 · For Charles Solomon · Confidential

Executive Summary

We built a separate GitHub Pages mirror of centripetaladvisors.com to test SEO, AI surfaceability, and content improvements without touching the live Framer site. The goal is to explore what a fully optimized content system looks like before committing changes to production.

Live at: credyset.github.io/centripetal-advisors-site-v2

What We Built and Why

Content Layer

The SEO audit found that centripetaladvisors.com has strong brand and positioning but weak organic acquisition structure — no schema markup, no FAQ structure, minimal internal linking, and no blog layer. We built the content system the audit recommended:

- 45 blog articles — built from on-disk LinkedIn post drafts, the Charles Content Library (all 16 pillars including WhatsApp material), and SEO audit recommendations
- 14 guides and interactive tools — scorecard, diligence readiness, venture debt, treasury hygiene, CFO fit calculator, runway modeler, board deck builder
- 6 service subpages with structured schema for search engines and AI systems
- Testimonials page — 14 cards from 7 sources (Appwork, Leverage VC, Exponential/MagicCare AI, HealthTech CEO, plus Reinman, Harris, Vinick, Rose/Schweitzer)
- Privacy policy mirrored from the live site

Blog Article Topics

CATEGORY	ARTICLES	SOURCE
SaaS Metrics	Burn multiple, NRR, CAC payback, unit economics, magic number, LTV:CAC	LinkedIn drafts

Fundraising	Pre-fundraising checklist, Series A timeline, data room, revenue recognition	LinkedIn drafts
Capital Structure	LOC timing, covenant reality, Rule of 40, capital stack, venture debt	Content Library
Operating Philosophy	10-80-10 AI framework, quality over growth, stop-doing lists, board ownership	Content Library
Decision Frameworks	Inversion thinking, cost of complexity, net sales efficiency	Content Library
Finance Function	When to hire, fractional vs VP Finance, bookkeeper/controller/CFO	Existing + audit

SEO & AI Surfaceability Layer

Every page on the site has been optimized for both traditional search and AI answer engines:

METRIC	COVERAGE	WHY IT MATTERS
FAQPage schema	74/74	Enables FAQ rich results in Google and AI citation
BreadcrumbList schema	74/74	Improves site hierarchy signals for crawlers
OG tags	74/74	Controls how pages appear when shared on LinkedIn/social
Canonical URLs	74/74	Prevents duplicate content issues
Answer-box (direct answer)	72/74	Positions content for AI answer extraction
Alt text	116/116 images	Accessibility + image search visibility
Internal cross-links	Avg 13.6/page	Helps search engines discover and weight content
dateModified	45/45 articles	Freshness signal for search ranking

Homepage Rebuild

The homepage was rebuilt to mirror the primary site's section structure while keeping the SEO improvements:

SECTION	STATUS
Hero with proof stats	Matches primary site
Your Financial Co-Pilot (with graphic)	Added — was missing
Trusted By / Client logos (13 logos)	Added — was missing
About Us (Charles portrait + founding story)	Added — was missing
Testimonials with attribution	Fixed — names were missing
Why Centripetal (4 cards incl. capital network)	Added "Right Network" card
Munger quote	Preserved
Guides link in navigation	Added across all 74 pages

What's Outstanding

1. Homepage visual refinement — The rebuild mirrors the primary site's sections but CSS styling isn't pixel-perfect compared to Framer's rendering. We'll continue tuning.
2. Measurement baseline — We need Search Console data, GA4 conversion paths, and AI prompt citation results to know which pages are actually performing. Without this, further content additions risk duplication.
3. Content quality review — The newest articles use claim-safe language and first-party material, but Charles hasn't reviewed the blog copy for voice accuracy.
4. Referral program content — Email touchpoint copy is staged but flagged for counsel/CPA review before publication.
5. Production migration path — If the structure is approved, we need to decide how to bring the schema, FAQ markup, blog articles, and guides into the live Framer site (or whether the GitHub site becomes a parallel content hub).

What We Need From Charles

1. Voice review of the blog articles

Especially the 10 articles built from WhatsApp and Fireflies content: LOC capital timing, covenant breach, Rule of 40, board meeting ownership, 10-80-10 AI, quality over growth, inversion, net sales efficiency, stop-doing lists, long engagement. These use his actual words and frameworks in editorial format. He should confirm the tone and framing feel right.

Why: These are the articles most likely to be shared on LinkedIn and most visible to prospects — getting his voice wrong would undermine credibility.

2. Decision on production path

Is the goal to migrate this content into the live Framer site, or should the GitHub Pages site become a parallel content hub?

Why: This determines whether we invest in Framer CMS integration or continue building on the static site.

3. Testimonial approval

We're using quotes from Shawn Landsberg (Appwork), David Rabinovici (Leverage VC), and the Exponential/MagicCare AI engagement on the testimonials page. Confirm these are cleared for public website use.

Why: The testimonials page is live on the GitHub site and visible to anyone with the URL.
